

Cleaning and Maintenance

Detailed Instructions on Cleaning skai Artificial Leather Products

(Additional document based on the general information on cleaning and maintenance in the respective product data sheet for the materials - www.skai.com/interior)

The unique feel, exclusive properties and expressive embossing give our high-quality skai® upholstery materials their individual character. In addition to extraordinary designs, skai® surfaces are also characterized by their ease of care.

Nevertheless, we recommend regular cleaning of the surfaces depending on how often they are used. Diligent cleaning is important for the hygiene and look of the surfaces, as well as helping to maintain durability.

The following cleaning instructions apply to all skai® artificial leather materials, regardless of color and purpose.

Required utensils

- › skai® cleaner/mild soapy solution
- › Sponge (for light/medium dirt)
- › Soft hand brush (for large amounts of dirt)
- › Microfiber or cotton cloth
- › Clear water

Cleaning procedure

Please remove any visible dirt immediately. We recommend carrying out the following cleaning procedure once a week on frequently used areas. Regular and careful cleaning guarantees long-lasting enjoyment of our high-quality skai® materials.

- 1|** Spray cleaning agent directly onto the material surface and leave to work for a few seconds.

- 2|** Work the sponge/brush evenly over the surface and with light pressure.

- 3|** Then wipe off the wet surface with a dry microfiber or cotton cloth.

- 4|** Finally, carefully remove any residue from the cleaner with a clean, damp microfiber or cotton cloth and plenty of clear water.

The process shown may need to be repeated in the event of particularly stubborn dirt.

Warning!

In the worst case, poor or incorrectly performed cleaning can lead to irreparable damage to the surface. In most cases, this is indicated by a hardened or broken/brittle coating.

Example of brittle surfaces etc. caused by poor or incorrectly performed cleaning:

Additional consumer information

Please always observe the relevant manufacturer's dosage instructions when using commercially available cleaning agents. In addition, no cleaning agents containing oils and fats should be used. Chemical cleaning is not suitable for skai® surfaces. Dried-in substances or substances that have been left to penetrate the surface over a long period of time can only be removed to a limited extent.

skai® material surfaces are not resistant to solvents, chlorides, polishing agents, cleaning polish and aerosol sprays. Additional treatment with leather/artificial leather care products is not necessary.

Please note that staining of the material through jeans or other textiles is excluded from any warranty.
