

Processing recommendations - Bonding of skai® artificial leather

General information

Suitable for many types of upholstery applications and coverings in the upholstery industry. Particularly well-suited for trendy residential and commercial applications and in public buildings and facilities. Problem-free processing using the usual methods (sewing, stitching, gluing, nailing). Do not use colored adhesives or solvent adhesives.

Special instructions - Adhesive bonding

The following instructions for the adhesive bonding process serve merely as a recommendation. Due to the variety of products in this area, the method for each new project should be coordinated and agreed with the suppliers or manufacturers of the components used. For this purpose, you will find the corresponding contact information of several adhesive manufacturers in the annex.

Please always use solvent-free adhesives. When using solvent adhesives, undesirable interactions can occur between the materials, which in a worst-case scenario can result in total failure of the structure. This usually manifests itself in hardening or embrittlement of the surface of the artificial leather.

Usually, dispersion adhesives or similar adhesives are used. Depending on the intended use and area of application, their chemical composition may vary accordingly. Please check the suitability of the adhesive system in advance.

Please always observe the product data sheets and/or recommendations of the respective adhesive manufacturer regarding application quantities as well as application methods.

If you have further technical questions about the processing method, please contact our Customer Service directly <https://www.skai.com/en/interior/contact-us/>

Annex

Further information

Our spoken and written application engineering recommendations, which we pass on based on our experience and in accordance with the current state of the art, are non-binding. They do not absolve buyers of their own responsibility to check the suitability of our products for the intended purpose. This applies in particular to all components that are processed together with our product and their compatibility in combination with each other. In all other respects, our General Terms and Conditions shall apply. All previous differing regulations are hereby no longer valid.
